Dehumidifiers and Vacuums

HEPA Vacuums Dehumidifiers

While a ducted/central vacuum vented outside is best for those with CIRS, a good quality HEPA model should be the minimum vacuum patients get. Look for vacuums which have a large HEPA surface area that is well sealed, has good suction power, reasonable decibel levels and a power head for carpets. Replaceable bags are preferred over bag-less models.

Some recommended models include:

Professional quality: [Nilfisk GD930](#)

Pro-consumer quality: [Sauber Intelligence SI-200](#), [PacVac](#)

Consumer quality: [Miele Classic C1](#) + [SF HA 30 HEPA filter](#) OR [Complete C3 Allergy Powerline](#)

See [Choice](#) for more vacuum reviews.

See the [Choice](#) for recommended consumer dehumidifiers. Things to look for include noise level, power consumption, size and maneuverability. [Ionmax](#) rate highly.
